

BETTER
INFORMED.

BETTER
PRODUCTIVITY.

Cartula Health's Clinical Mobility Solution streamlines clinical processes. It supports key workflows at the point of care using a mobile phone including:

- Document consultations
- Perform billing
- Perform intra-organisational referrals
- Scan documents and photos to include with consultation note or referral.
- Scan patient's ID barcode to quickly find the patient.
- Optional digital communication with outpatient that becomes part of the patient's EMR

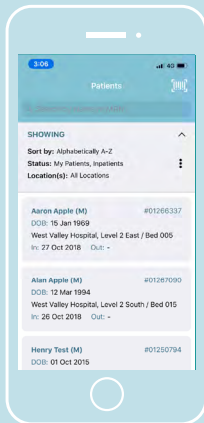

Cartula Mobile is fully integrated to EMR and Billing, creating a single source of the truth within your hospital environment.

CONSULTATIONS & BILLING

- Through integration with EMR, the patient list is specific for the clinician or can be modified to include other patients within the hospital
- At the time of the consultation, the clinician can quickly create a note through the use of user definable note templates, scan a document, take a photo.
- Consultation note templates have MBS billing items associated to simplify the billing process for private patients
- The clinician can create a draft note (including images) which can be edited and submitted to the EMR and Billing system at a later time.
- Public patient's data can be sent to be used as activity based statistics

REFERRALS

- Intra-organisational referrals can be sent from the app to any specialist within the facility in a fully integrated workflow within the EMR
- Referrals will appear as a notification on the app and can be sent via email and/or to the EMR as a notification.
- This process closes the loop and allows the organisation to bill for the referred services performed.
- May be used external to the organisation in future releases

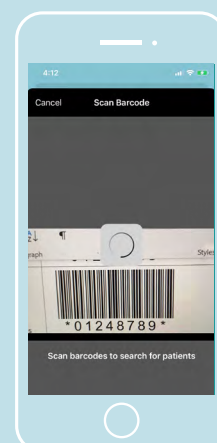

BENEFITS

- Increases productivity as short notes and referrals can be done while on the move.
- Increased user satisfaction as both note and billing can be done simultaneously at the bedside without having to access another device.
- Evidence shows that this enhanced workflow increases revenue as it is easier for clinicians to bill for their services
- Reduces administrative cost as clerical staff have less follow ups for unbilled services.

PRODUCTIVITY

- Capability to use Phone PIN, Fingerprint or Face recognition for quick access
- Quick find of patient using barcode scanning
- Document scanning and images or photos can be included as part of a consultation note or a referral
